ASBESTOS MANAGEMENT AND
ENVIRONMENTAL CONSULTANTS

ASBESTOS AWARENESS TRAINING

Amencon Limited is registered as a HSE Partner in the Asbestos Risk Management Campaign and can offer a training package in the form of a Presentation developed and supported by the HSE. This modular Presentation is aimed at people who have a role to play in the management of asbestos-containing materials in premises.

Asbestos awareness training is required to be given to employees whose work could foreseeably expose them to asbestos and, in particular, all those involved in demolition and in the refurbishment, maintenance and allied building trades (HSE ACOP L143 para. 126).

ASBESTOS AWARENESS TRAINING FOR MAINTENANCE PERSONNEL (Sessions 1 & 2)

The first session of the presentation will give a background to the problem, revisiting why asbestos is hazardous and how it can harm people. It then goes on to describe the problem of asbestos-containing materials (ACMs) in buildings and who might be exposed to the hazard. The likely locations of asbestos-containing materials in buildings are discussed. There is then a description of the current law and an introduction to the new duty to manage. The second part of the presentation gives practical advice and guidance on action to be taken if asbestos is uncovered during routine maintenance and repair activities. A short HSE video (Part 1 "How are you today") is used to illustrate the points. The key message is the importance of checking whether material contains asbestos before starting work.

ASBESTOS AWARENESS TRAINING FOR DUTYHOLDERS AND MANAGERS (Session 3)

This session follows on from the basic asbestos awareness training presentation to give a detailed review of the new duty to manage including risk assessment and development of an asbestos management plan. Part 2 of the HSE video "How are you managing" is shown to illustrate the points. This shows how a dutyholder might address the requirements of the duty to manage.

ASBESTOS AWARENESS TRAINING FOR IN-HOUSE ASBESTOS INSPECTORS (Session 4)

This session provides guidance on carrying out in-house inspections of the condition of asbestos materials and will involve a short site inspection and practical to illustrate the procedures to be carried out.

Each delegate will receive a comprehensive set of course notes for future reference and a Certificate of Attendance.
